TITLE : POLYURETHANE RESIN COMPOSITION AND SYNTHETIC LEATHER OR SYNTHETIC RESIN MOLDED ARTICLE COVERED WITH THE SAME

ABSTRACT : PROBLEM TO BE SOLVED: To provide a polyurethane resin composition being applicable on a surface of a synthetic leather or a synthetic resin molded article as a film having such properties as adhesion resistance, abrasion resistance, resistance to staining, a low friction coefficient and a friction coefficient of small amplitude.

SOLUTION: The polyurethane resin composition is obtained using a polyurethane resin and/or polyurethane-urea resin as a chief material. The chief material is obtained by including, through an organic diisocyanate, a siloxane compound having two active hydrogens in a molecule in an amount of 0.1 to 5.0 pts.wt. of its siloxane bond relative to 100 pts.wt. of the chief material and 0.5 to 20 pts.wt. of a butadiene compound.
